

AXALTA COATING SYSTEMS

Your Passion.
Our Coatings.

Our coatings are virtually everywhere.

Axalta's passion has made the world more colorful for more than 150 years. Our coatings are used on small and large surfaces, from cosmetic compacts and alternators, to helmets, guitars, race cars, rollercoasters, playgrounds, and skyscrapers.

Our passion goes beyond the surface. We look for ways to also brighten our communities by focusing on programs that are related to Science, Technology, Engineering, and Mathematics (STEM) education, sustainability, and being a great corporate neighbor.

We are committed to providing customers with quality, innovation, and the delivery of exceptional products everyday.

Your Passion. Our Coatings.

What we do

Our full spectrum of superior coating systems, technologies, and color matching tools are designed to help body shops achieve the perfect color match as efficiently as possible; helping to improve shop productivity so cars can quickly return to the road.

Axalta's vehicle coatings protect cars, trucks, buses, and trains, and our unique pigments contribute to colorful finishes. Our superior corrosion protection of electrocoats, lush basecoats, and durable clears are formulated to provide a flawless finish that will endure the toughest conditions.

Our industrial coatings add durability and brilliant color to building components, architectural facades, pipes, furniture, sporting equipment, wood flooring, kitchen cabinets, electric motors, electronic devices, and other products that are built for performance.

The technology of performance

Our ability to innovate and develop new coating products relies on decades of polymer and resin formulation capabilities and a deep understanding of pigments and color. This technology brings together chemistry, materials science, and engineering to develop, manufacture, and apply coatings that meet the unique needs of our customers.

Sustainability is central to everything we do as a coatings company

Our manufacturing process, applications, and products are created with responsible sustainability and good corporate citizenship in mind. Axalta's product application systems are designed to reduce time, waste, and hazardous emissions, while saving energy. Our manufacturing facilities have received ISO 14001 environmental certifications. We support sustainable projects in our communities that focus on the environment and resource conservation. These initiatives complement the benefits that coatings provide by enabling materials to last longer.
