Axalta Coating Systems Interior drum coatings

High-quality
protection
for metal
packaging.

Interior drum coatings are used to protect the inside of metal drums and black plate, tinplate and aluminium containers so they can be used safely as packaging for all kinds of filling goods. At Axalta Coating Systems we have decades of experience in producing, applying and testing interior drum coatings. We know our paint systems offer not only excellent resistance to chemicals, but also fulfill current EU and US food regulations, such as the US FDA requirements and the German BgVV recommendations. They also meet the steel packaging quality standard VPA 7.

We have tested our interior drum coatings' resistance to more than 1,400 different filling goods. Our interior drum coatings are easy to apply and offer outstanding elasticity and resilience during the drum manufacturing process.

Axalta Coating Systems offer two different drum coatings. The most popular is the brown epoxy-phenolic resin-based R78433. This interior drum coating, available worldwide, has excellent chemical resistance and provides best-in-class suitability for 92 per cent of all filling materials.

We also offer an unpigmented phenolic drum coating - R78007 gold - which has reliable chemical resistance and good general performance characteristics.

Our interior drum coatings are cadmium, chromium (VI), lead and mercury free, making them safe for the environment. They are easy to apply by air-mix or in airless, disc centrifuge, roller and electrostatic processes.

All these properties confirm that Axalta drum coatings offer total quality. You can be secure in the knowledge that these products are safe for use and protect the container as well as the products within.

Highlights

- Excellent chemical resistance
- Outstanding flexibility
- Reliable adhesion
- Resistance to more than 1,300 filling materials
- VPA 7 quality standard compliant
- Fulfills BgVV recommendations
- EU food and US FDA approved
- Suitable for food storage
- Environmentally friendly - cadmium, chromium (VI), lead and mercury free
- Easy application
