PercoTop® EP

High performance topcoat for tough environments.

At Axalta Coating Systems, we know that harsh conditions and chemical exposure are typical for industrial environments. Paint has to be hard-wearing to cope with these circumstances. PercoTop® EP is the robust solvent-based topcoat solution from Axalta. This 2-component epoxy topcoat is ideally suited for internal use on high-performance industrial applications thanks to its excellent mechanical and chemical resistance. It offers industrial machines and equipment a protective coating with an extremely hard surface and optimum adhesion to the substrate when used with the correct PercoTop® primers or on a pre-existing fully cured finish.

And it also looks good. PercoTop® EP is based on unique concentrated mixing tints. When combined with a dedicated epoxy binder, these tints make it possible to produce a wide range of colours on demand.

PercoTop® EP can be applied using all standard coating processes such as conventional, HVLP, high-pressure, airless or air-mix application methods.

For paint users who want to use an entire paint system based on the same paint technology, our epoxy-based EP primer can be used together with the PercoTop® EP topcoat. But whatever Axalta primer you choose, this topcoat guarantees robust, high performance on a wide range of applications.

Highlights

- 2K epoxy topcoat
- Solventborne
- For tough environments
- Exceptional chemical resistance
- Outstanding resistance to mechanical wear and tear
- Extremely hard surface finish
- Excellent adhesion
- Smooth finish
- Easy to use
- Universal application parameters
- Large colour range
