PercoTop® EP Primer CS381

Corrosion and
chemical
protection for
metal
substrates.

Large surface areas on commercial vehicles and trailers need long-term protection to look good. Axalta Coating Systems has developed a primer that offers the scientifically superior performance required to achieve just that. PercoTop® Primer EP CS381 is a fully compliant, chromate-free, two-component epoxy primer surfacer. It has been specifically formulated for commercial vehicles and trailers, including standard and refrigerated box superstructures, concrete mixers and pumps, mobile cranes, waste disposal vehicles and earth moving equipment. It offers high productivity in application, fast drying times and exceptional overspray melt-in. These benefits also make PercoTop® Primer EP CS381 suitable for use as a shop primer on spare parts in industrial applications.

Its exceptional corrosion and optimal chemical resistance mean it is an ideal first protective coat for all new metal substrates. Thanks to its outstanding adhesion, PercoTop® Primer EP CS381 minimises inconsistencies to give an excellent end result. It also has excellent sagging resistance, which is essential when coating complex shapes with overlapping spray zones.

As part of the PercoTop® system, the primer can be applied with all standard equipment, even electrostatic application, over a wide range of substrates, including bare metals, OEM finishes, cured repair finishes and polyester putties. PercoTop® Primer EP CS381 also boasts good filling properties on shot-blasted steel.

This commercial vehicle epoxy primer surfacer can be coated with all PercoTop® 2K Primers and surfacers and the PercoTop® CV topcoat range to produce a long-lasting, outstanding finish.

Highlights

- Excellent corrosion, humidity and chemical resistance
- Fast drying
- Easy to apply
- Outstanding vertical stability
- Suitable for broad range of substrates
- Superior overspray melt-in
- Ideal for large surface application
- Good filling properties and edge covering
- Sound topcoat hold-out
- Easy, smooth application with all standard application equipment from conventional to HVLP, high pressure, air-mix, airless and electrostatic application
- Environment-friendly, chromate-free
- Compliant with current and future legislation
