Nap-Gard®
FBE Valve Powder Coatings
Valve coatings that provide superior chemical and corrosion protection.
Nap-Gard® powder coatings provide superior corrosion and chemical protection for valves used in many different environments by providing protection, durability, and strong impact resistance. Nap-Gard valve coatings are designed for projects needing high builds and excellent edge coverage, which extends the life of your valves.

Nap-Gard is ideal for the following industries:
- Pipelines
- Oil and Gas
- Biopharm
- Marine and Wastewater
- Residential

Benefits:
- Short flow provides exceptional edge coverage
- Will not sag or picture frame at high film builds
- Thermosetting, 100% solids
- Environmentally friendly
- Durable and flexible
- Higher Operating Temperatures (up to 225°F)

Application:
- Nap-Gard coatings can be applied by electrostatic spray, fluidized bed or hot flocking. Depending on application, film builds can be achieved between 5-60 mils.
- Proper protection is required if the coating will be exposed to UV radiation. Nap-Gard fusion bonded epoxies are not designed to withstand long exposure to UV radiation. If the coating is expected to be exposed to UV rays for an extended period of time, proper care must be taken to prevent degradation of the coating below the target film thickness.

Specifications:
- Certified NSF/ANSI Standard 61 Drinking Water System Components
- Meets the requirements of AWWA C213 C116, C213, C550
