

Rail

Axalta Coating Systems, with its sustainable, technology-driven solutions, is the partner of choice for the rail industry. Both the OEM and refurbishment sectors value our high-performance solutions. And we have expertise in everything from passenger carriages to high-speed trains, locomotives, trams and metros, and interiors and exteriors. Our coatings are approved by numerous rail operators, including Deutsche Bahn and CP1 SNCF. Our coatings for rail are renowned for their fire- and smoke-resistance, as well as their anti-graffiti properties.

The cost of rail cars' maintenance, repair and upkeep, are major economic factors to consider, as is the weight of the paint on a rail car. With all of this in mind, we've ensured our Imron® primers, fillers, topcoats, and our waterborne clear-over-base systems offer not only durability and resistance to wear and tear but also contribute to savings, while still looking good.

We are constantly investing and researching eco-friendly technologies to meet the challenges of the future today.
